Large Datasets

- Could you provide some examples of real-world applications where datasets with tens or hundreds of millions of rows of data are commonly encountered? What are the specific challenges and solutions in those domains?

Stochastic Gradient Descent

- How can we reduce the variance generated from sampling the data into batches from SGD

Hashing Trick

- What are some commonly used hash functions in the field of machine learning, and what are their strengths and weaknesses.

SGD and Epochs

- You talked about the relevance of tuning learning rates for model training, What are some common learning rate assigning techniques and when are they appropriate to use
