Support Vector Machines

- I would love explanation on the separation concept of 3d or 4d plots

Margins and Loss

- How does Hinge loss compare to other loss functions like entropy loss or Mean squared error.

The Kernel Trick

- How do I choose the right kernel function (linear, polynomial, RBF or Sigmoid) for a given dataset

Scaling

- Please would appreciate further explanation on O(n2) complexity. I know its an integral topic in data structures and algorithms, but I didn't take it during BSc. because I wasn't a CS major. I'll try to do my due diligence in studying on the concept before class though
